JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for containerless crystal growth
– – of proteins 204
– for growth and crystallographic monitoring by fiber optics
– – of proteins 216
– for macromolecular crystallography
– – by synchrotron radiation 245

Computer simulation
– of protein crystal growth 93, 130
Constitutional supercooling
– of proteins 244
Convection 1

Diffusional control
– of cluster growth 44
– of protein crystal growth 93, 175

Heat control
– of protein crystallization 244
Hydrodynamics, see Convection

Kinetics
– of growth 1, 44, 63, 124, 185, 204, 292
– of interface control 1
– of nucleation 1, 44, 50, 99, 260

Lysozyme 1, 28, 40, 93, 112, 181, 292

Microgravity, growth under
– of acidic phospholipase A2 227
– of lysozyme 40
– of proteins 1, 227, 233
Morphological stability
– of protein crystals 175

Nucleation
– of lysozyme 40, 150, 185
– of proteins 63, 185, 216

Phase diagram
– of aspergilus niger proteinase A 118
– of cytidine deaminase 155
– of lysozyme 28, 44
– of proteins 50, 124
Precursor
– for lysozyme crystallization 28
Proteins 1, 28, 44, 63, 93, 99, 130, 138, 142, 170, 175, 181, 185, 192, 198, 204, 216, 227, 233, 244, 248, 253, 260, 270, 275, 284, 288, 297, 301, 308
Purification of materials
– of lysozyme 1
– of macromolecules 74
– of proteins 50, 142, 253, 260, 280, 292

Solution growth technique
– by batch method
– – of proteinase A 118
– – of proteins 170, 192, 204
– by gel acupuncture method
– – of proteins 93, 185, 260
– by hanging drop vapor diffusion
– – of chaperonin-60 297
– – of ribonuclease U2 270
– – of Thermus thermophilus 301
– by low temperature method
– – of ferritin 138
– – of macromolecules 34
– by sol–gel method
– – of lysozyme 40
– by vapor diffusion
– – of biological macromolecules 50
– – of proteins 170
– – of ribosomes 308
Surface morphology
– by liquid phase epitaxy
– – of proteins 198
– of Thaumatin 63

Vapor growth technique
– by sitting drop vapor diffusion method
– – of human estradiol dehydrogenase 275
– – of proteins 99
